## Health Problem Data Collation (Annual Tally)

It is a requirement that you annually complete a review of health and performance records.
This must comprise of a review of mortality records land possible reasons for mortality); reason for treatment (taken from the medicine records) and abattoir feedback (where provided).

Below is a template that covers all of the information you must complete. You may use a different template, but a similar review must be undertaken.

Use this table to tally the treatments given that did not form part of the routine management of stock, and any deaths/ culls or feedback from a vet / abattoir that may be attributable to a health problem.
Condition

Ewe Specific
Abortion

Lambs Specific
Congenital Defect

## Mortality Data Collation

## Lambs

Stillborn

Lost up to approx. 7 days

Lost between 7 days and weaning

Lost post weaning
